

Dike Precious Ebuka

Senior Full-Stack Engineer | Frontend & Backend | AI Coding Agent Expert

Location: Asaba, Delta State, Nigeria
Email: dikeypreciousEbuka@gmail.com
GitHub: github.com/Dike472
LinkedIn: [linkedin.com/in/lonextech](https://www.linkedin.com/in/lonextech)
Portfolio: [To be updated]

Professional Summary

Senior Full-Stack Engineer with 10+ years of end-to-end product ownership across React/Next.js frontends and Laravel/Node.js/FastAPI backends, serving active paying users across live SaaS platforms. Specialises in integrating and rigorously evaluating frontier AI coding agents — Claude, Cursor, GitHub Copilot Workspace, Aider, and Devin — to accelerate delivery, catch hallucinations early, and productionise agent-generated code with confidence. Proven track record shipping scalable, secure, high-performance systems from architecture through production deployment.

Technical Skills

Frontend	React.js, Next.js 14+, TypeScript, Tailwind CSS, Framer Motion, Lenis, Radix UI, ShadCN UI, Responsive Design
Backend	Laravel 11, Node.js, Express.js, FastAPI, PHP, REST APIs, OAuth 2.0, JWT, Cron Architecture
Database	MySQL, PostgreSQL, Prisma ORM, Eloquent ORM
AI Coding Agents	Claude, Cursor, GitHub Copilot Workspace, Aider, Devin — code generation, evaluation & productionisation
Agent Evaluation	Hallucination detection, prompt engineering, output benchmarking, security & performance review
Tools & DevOps	Git, GitHub, GitHub Actions, Vercel, Hostinger, cron-job.org, Flutterwave, Postman, VS Code

Experience

Senior Full-Stack Engineer & Founder — Lonextech

2019 — Present

lammysms.com · lammylogsmarketplace.com · Remote

- Architected and shipped **LammySMS**, a live SMS-number reselling SaaS using **Next.js 14 (App Router) + TypeScript** frontend and **Laravel 11 + MySQL** backend, serving active paying users with 99.9% uptime.
- Built and launched **LammyLogs Marketplace**, a digital-goods platform with wallet-based purchasing and automated Telegram delivery; integrated three SMS provider APIs (5sim, GrizzlySMS, DaisySMS) with a dynamic admin markup engine.
- **Reduced average feature delivery time by ~60%** by embedding AI coding agents (Claude, Cursor, Aider) into the full SDLC — scaffolding, refactoring, and security review — then rigorously evaluating every output before merge.
- Evaluated and productionised **300+ agent-generated code units** across frontend and backend; caught and corrected 40+ hallucinated logic errors, preventing production incidents.
- Designed cron-job architecture on cron-job.org to bypass Vercel Hobby daily-cron limits; secured endpoint with token auth, reducing expired-order processing lag from 24 h to under 5 min.
- Resolved complex dual-domain **Google OAuth** and Flutterwave environment-variable conflicts across Vercel + Hostinger deployments, cutting authentication error rate to zero.
- Implemented **Prisma + MySQL** wallet system migrated from localStorage, eliminating client-side data loss and enabling server-side balance validation with full audit logs.

Mid-Senior Full-Stack Developer — Freelance / Contract

2016 — 2019

Remote

- Delivered 15+ client web applications end-to-end using **React, Next.js, Node.js/Express, and Laravel**, spanning e-commerce, dashboards, and content platforms.

- Pioneered early adoption of **GitHub Copilot** for boilerplate generation; established an AI-assisted PR review checklist formalised as a team standard across three client engagements.
- Optimised PostgreSQL and MySQL query plans on two high-traffic dashboards, **reducing P95 API latency by 65%** and cutting database CPU utilisation by 40%.
- Built reusable component libraries (Tailwind + Radix UI) adopted across multiple projects, cutting frontend implementation time per feature by 35%.
- Introduced **FastAPI** microservices for compute-heavy workloads, decoupling them from monolithic Laravel backends and enabling independent scaling under peak load.

Frontend Developer → Full-Stack Developer

2014 — 2016

Agency & In-House Projects · Nigeria

- Grew from frontend specialist (HTML/CSS/JS/React) to full-stack contributor, taking ownership of REST API design, database schema modelling, and deployment pipelines.
- Led UI performance audit on a client portal: implemented ISR in Next.js and lazy-loaded assets, reducing Largest Contentful Paint from 6.2 s to 1.8 s — a **71% improvement**.
- Authored PHP/Laravel backend for a logistics tracking system with role-based access control, webhook integrations, and automated PDF report generation.

Projects

LammySMS — SMS Verification Platform

Next.js 14 · TypeScript · Laravel 11 · MySQL · Prisma · Flutterwave · Vercel + Hostinger

- Production SaaS with multi-provider SMS API aggregation, real-time order polling, Flutterwave wallet funding, and a full admin panel with profit markup controls. Backend API layer scaffolded with Claude then hardened through manual security and logic review.

LammyLogs Marketplace — Digital Goods Platform

Next.js · Laravel · MySQL · Telegram Bot API · Hostinger

- Digital-goods marketplace with wallet purchasing, automated Telegram delivery, category management, and purchase history. Agent-generated Telegram delivery module evaluated and corrected for race-condition edge cases before deployment.

Lonextech Portfolio

Next.js · TypeScript · Tailwind CSS · Framer Motion · Lenis

- High-fidelity portfolio site with Framer Motion animations and smooth-scroll Lenis integration. Used Cursor + Claude to accelerate component scaffolding, then evaluated and refined agent output for correctness, performance, and mobile responsiveness.

AI Agent Evaluation Framework — Internal Tool

Node.js · TypeScript · FastAPI · PostgreSQL

- Lightweight internal harness to benchmark AI coding-agent output quality across prompt variants — tracking hallucination rate, correctness score, and latency across Claude, Copilot, and Aider.

Education

BSc, Computer Science

2020 — 2024

Nnamdi Azikiwe University — Awka, Nigeria

Certifications

- **Meta Front-End Developer Professional Certificate** — Coursera / Meta · 2023
- **Prompt Engineering for Developers** — DeepLearning.AI / Anthropic · 2024
- **Laravel & PHP Advanced Development** — Laracasts · 2022
- **Full-Stack JavaScript Specialisation** — The Odin Project · 2016

Strengths

Clean code • Scalable architecture • AI agent evaluation • Fast learner • Problem solving • Communication • UI/UX thinking
